

Musculoskeletal Disorders (MSDs) are the leading cause of pain, suffering and disability in the U. S. workplaces. **The cost of preventative measures to control ergonomic costs pales in comparison to the staggering costs of MSDs.**

MSDs account for one-third of all workers compensation costs with total cost in the U.S. estimated between \$45 and \$54 billion a year.

Total costs include:

Absenteeism, lost productivity, and increased health care, disability, and worker's compensation costs.

It's All About the Fit

www.advan-ergo.com

WHY ERGONOMICS?

Ergonomics involves fitting the task to the worker. Our ergonomic program provides a common-sense approach for designing the workstation to the task to reduce work-related injuries. **Good ergonomic programs are cost-effective – they save more than they cost.**

Employer benefits:

- Our ergonomic expertise and experience provides cost efficient and effective solutions.
- Simplify and standardize ordering process.
- Provide customized catalog with preapproved products.
- Reduce work-related injuries.

Employee Benefits:

- Improve comfort and wellness at work.
- Test and evaluate products before purchasing.

ERGONOMIC PRODUCTS

Our comprehensive line of ergonomic furniture and computer support products:

- Are designed for increased comfort and productivity.
- Support neutral postures and fit all sizes.
- Minimize hand, wrist, neck and back discomfort.

Tables and workstations

Height adjustable workstations and desks, desktop sit-stand converters, mobile sit-stand tables and carts, and conference room furniture.

Ergonomic Seating

From Petite to Big & Tall and Bariatric sizes. For office, labs, conference rooms, or 24/7 intensive use environments.

Support Products & Ergonomic Accessories

Includes monitor and keyboard arms, ergonomic mice and keyboards, document holders, lumbar supports and anti-fatigue mats.

A PROACTIVE APPROACH

Ergonomic risks are identified and managed through three simple steps:

1. **Assess:** Review the workplace to identify work-related ergonomic risks.
2. **Control:** Recommend changes and products to control and minimize risk factors.
3. **Educate:** Train employees on proper use of products and ergonomic principles to minimize the risk of injuries.

Let us show you how to maximize the value of your ergonomic investment and make a difference for your company and employees.
